Application for Software Developer – International Payment Systems

Dear Hiring Manager,

I am writing to express my strong interest in the Software Developer position for International Payment Systems (Auslandszahlungsverkehr). As an experienced Mainframe Developer with over 5 years of hands-on expertise in developing and maintaining mission-critical systems, I bring the technical competencies and proven track record that align perfectly with your requirements.

How I Match Your Requirements:

Throughout my career at GalaxE.Solutions and Cognizant, I have gained extensive experience developing and supporting high-criticality systems in the financial services and healthcare sectors. My qualifications directly address your key responsibilities:

Software Maintenance and Development:
I have developed and maintained 45+ batch COBOL programs processing over 2 million records daily with 99.9% system uptime. My experience with complex data processing systems in regulated industries translates directly to the demands of international payment infrastructure.

Incident and Disturbance Management:
Through 24/7 production support, I achieved a 95% first-call resolution rate for critical incidents. I am well-versed in structured incident management processes and have consistently delivered zero downtime during business-critical periods, demonstrating my ability to maintain operational stability.

Module Enhancement and Development:
I successfully designed automated data exchange systems that reduced manual intervention by 70% and optimized batch processing times by 30% through DB2 and JCL improvements. I excel at translating customer requirements into efficient, scalable technical solutions.

Requirements Analysis and Stakeholder Collaboration:
Working closely with business departments, I have analyzed requirements, created Technical Specification Documents (TSD), and conducted Joint Application Development (JAD) sessions. I understand the importance of bridging technical and business perspectives, especially in financial services.

Technical Documentation:
I have extensive experience creating and maintaining comprehensive technical documentation,

system design documents, and test plans that ensure knowledge transfer and system maintainability.

Technical Profile:

My technical expertise includes COBOL, JCL, DB2, IMS DB, VSAM, and tools such as Endevor, Ctrl-M, FileAid, and IBM Debug Tools. Importantly, I am experienced with secure data transmissions via MFT, FTP/SFTP, and the integration of international data formats (CIF850, CIF810, CIF856), which is highly relevant for international payment systems.

Why I Am the Right Fit:

- **Location:** Currently based in Wolfsburg with valid German residence permit and immediate availability
- **Continuous Learning:** Pursuing Computer Science diploma at 42 Wolfsburg (expected February 2026) to strengthen my technical foundation
- **Relevant Experience:** My background in complex batch processing systems and secure data exchange processes translates directly to international payment infrastructure
- **Compliance Expertise:** Proven track record working with strict compliance requirements (HIPAA) and maintaining data security in regulated environments
- **Team Collaboration:** Experienced working with international teams and adapting to established governance processes

I am confident that my technical expertise, problem-solving abilities, and experience operating mission-critical systems will enable me to contribute meaningfully to your team. The opportunity to work on the critical infrastructure for international payment systems at a major German financial institution is particularly motivating to me.

I am available for an interview at your earliest convenience and look forward to discussing how my qualifications align with your needs.

Thank you for considering my application.

Sincerely,

Guruvenu Kamanuru
