PROFESSIONAL SUMMARY

Mainframe Developer transitioning to SOC Analyst roles with 5+ years of experience in production support, data security, and system monitoring. Currently completing Ironhack Cybersecurity Bootcamp (2024-2025) and 42 Wolfsburg Software Engineering Diploma. Built comprehensive Docker-based SOC Detection Lab demonstrating practical skills in SIEM operations, IDS/IPS, log analysis, and threat detection. Strong foundation in data validation, secure data transfer, storage security, system monitoring, and compliance reporting. Authorized to work in Germany without visa sponsorship.

Core Competencies: Data Security | System Monitoring | Log Analysis | Incident Management | SIEM Operations | Threat Detection | Network Security | Production Support

---

TECHNICAL SKILLS

Security Operations & Analysis

- **SIEM/Log Management:** Splunk, ELK Stack (Elasticsearch, Logstash, Kibana), Wazuh
- **IDS/IPS:** Suricata, Snort, Network Traffic Analysis
- **Threat Detection:** MITRE ATT&CK Framework, Kill Chain Analysis, IOC Identification
- **Security Monitoring:** Real-time Alert Triage, Log Correlation, Anomaly Detection
- **Incident Response:** Evidence Collection, Root Cause Analysis, Containment Strategies

Security Tools & Technologies

- **Network Security:** Wireshark, Nmap, Netcat, TCPdump, Network Protocol Analysis
- **Vulnerability Assessment:** Nessus, OpenVAS, Nikto, OWASP ZAP, Qualys
- **Penetration Testing:** Metasploit Framework, Burp Suite, Hydra, John the Ripper
- **Forensics:** Autopsy, Volatility, FTK Imager, Memory Analysis
- **Endpoint Security:** EDR concepts, File Integrity Monitoring (FIM), Host-based IDS

Operating Systems & Infrastructure

- **Linux:** Kali Linux, Ubuntu, Security Hardening, Bash Scripting
- **Windows:** PowerShell, Event Log Analysis, Active Directory Security
- **Containerization:** Docker, Docker Compose, Container Security
- **Cloud Security:** AWS (EC2, S3, IAM), Security Groups, Cloud Architecture

Programming & Scripting

- **Languages:** Python (Security Automation), Bash, PowerShell, SQL
- **Security Scripting:** Log parsers, IOC extractors, Automated threat hunting scripts
- **Data Analysis:** Python (Pandas, NumPy), SQL queries for log analysis

Frameworks & Standards

- **Security Frameworks:** NIST Cybersecurity Framework, MITRE ATT&CK, Cyber Kill Chain
- **Compliance:** OWASP Top 10, ISO 27001 Awareness, GDPR Basics
- **Methodologies:** Security Incident & Event Management (SIEM), SOC Best Practices

---

HANDS-ON CYBERSECURITY PROJECTS

Docker-Based SOC Detection Lab | Personal Project | 2024-Present

Comprehensive Security Operations Center simulation for threat detection and incident response training

Architecture & Implementation: - Designed and deployed containerized SOC infrastructure using Docker Compose (15-20 min deployment vs 4-6 hours for VM-based setup) - Built multi-container environment: Elasticsearch (SIEM core), Logstash (log pipeline), Kibana (visualization), Wazuh (HIDS), Suricata (IDS), Filebeat (log shipper) - Configured custom Docker network (172.20.0.0/16) with isolated attacker, victim, and monitoring segments - Created attack simulation environment: Kali Linux (attacker), Ubuntu web server (victim), Windows log simulation

Security Operations & Detection: - Developed detection rules in Kibana (KQL) for common attack patterns: credential dumping, brute force, SQL injection, privilege escalation - Configured Wazuh for file integrity monitoring (FIM), vulnerability detection, and compliance auditing - Implemented Suricata IDS with custom rule sets for network-based threat detection - Built Logstash pipelines for log normalization and enrichment from multiple sources

Threat Simulation & Analysis: - Executed MITRE ATT&CK-mapped attack scenarios: reconnaissance (Nmap), exploitation (Metasploit), post-exploitation techniques - Generated and analyzed security events: failed authentication attempts, web application attacks, network scanning - Performed end-to-end incident response: alert triage → investigation → containment → documentation - Created detection playbooks for common attack vectors with step-by-step investigation procedures

Technical Achievements: - Reduced lab deployment time by 80% compared to traditional VM-based setup (15 min vs 4-6 hours) - Optimized resource usage: 8-12GB RAM vs 16GB+ for VMs, enabling portable demo environment - Documented entire lab setup with deployment scripts for reproducible security testing - Demonstrated ability to quickly spin up security infrastructure for threat hunting exercises

Tools & Technologies: Docker, Docker Compose, ELK Stack, Wazuh, Suricata, Filebeat, Kali Linux, Metasploit, Nmap, Wireshark, KQL, Bash scripting

Business Value: Interview-ready portable SOC lab demonstrating practical security operations skills, attack simulation capabilities, and modern containerized infrastructure knowledge

---

Network Security & Penetration Testing Lab | Ironhack Bootcamp | 2024-2025

- Conducted vulnerability assessments on intentionally vulnerable applications (DVWA, bWAPP)
- Performed network penetration testing: reconnaissance, scanning, exploitation, post-exploitation
- Analyzed network traffic with Wireshark to identify malicious patterns and data exfiltration
- Documented findings in professional penetration testing reports with remediation recommendations

---

SIEM Log Analysis & Threat Hunting | Personal Project | 2024

- Configured Splunk to ingest logs from multiple sources (Windows Event Logs, Syslog, Apache)
- Created custom dashboards for security monitoring: failed logins, privilege escalation, suspicious processes
- Developed correlation rules to detect multi-stage attacks across different log sources
- Practiced threat hunting using MITRE ATT&CK techniques across authentication and lateral movement

---

PROFESSIONAL EXPERIENCE

Sr. Software Developer | GalaxE.Solutions, Hyderabad, India | Nov 2022 – Jul 2024

US Healthcare Project – Polar Eligibility | Mainframe-ELK Integration

Developed automation solutions for processing Medicaid, Medicare, and Commercial client data. Led implementation of Mainframe-to-Elasticsearch integration project for centralized log management and monitoring.

Key Responsibilities: - **Mainframe-ELK Integration:** Designed and implemented automated file transmission application to transfer log data from mainframe systems to Elasticsearch for centralized monitoring and analysis - Built data extraction routines in COBOL to capture and format mainframe application logs, system logs, and batch job outputs for Elasticsearch ingestion - Developed automated data switch system using COBOL, JCL, and shell scripts to streamline log data transmission and healthcare data reporting workflows - Configured MFT (Managed File Transfer) and SFTP connections to securely transmit log files from mainframe to Elasticsearch cluster - Created data transformation pipelines to convert mainframe log formats (COBOL copybooks, VSAM records) into JSON for Elasticsearch compatibility - Built and maintained batch programs using COBOL, JCL, DB2, and VSAM for healthcare data processing - Performed data validation and quality checks to ensure accuracy and compliance with HIPAA requirements - Provided 24/7 production support, monitoring batch cycles and resolving incidents to ensure timely completion - Analyzed system logs and batch job outputs using Elasticsearch queries to identify anomalies and troubleshoot issues - Conducted QA testing, prepared test plans, and supported UAT for new enhancements - Managed code versioning and deployment using Endevor and Jenkins

Security, Monitoring & Compliance: - Implemented secure log transmission from mainframe to Elasticsearch using encryption protocols (SFTP, MFT) - Enabled real-time log monitoring and alerting capabilities by integrating mainframe systems with ELK Stack - Monitored data access controls and maintained audit trails for HIPAA compliance - Identified and resolved data integrity issues affecting security posture through log analysis - Generated compliance reports by querying Elasticsearch for audit trail data and system events - Facilitated faster incident detection and troubleshooting through centralized log aggregation

Technical Environment: COBOL, JCL, DB2, VSAM, Elasticsearch, MFT, SFTP, AWS, Jenkins, Endevor, Shell Scripting, Unix/Linux, JSON

Associate Developer | Cognizant Technologies, Chennai, India | May 2019 – Nov 2022

Retail Import-Export Project – Ford Motor Company

Worked on support and upgrade project managing transactions between importers and exporters with focus on data security and system reliability.

Key Responsibilities: - Developed and maintained batch programs using COBOL, DB2, JCL, and IMSDB for order processing - Managed secure data exchanges via SFTP across various business markets and trading partners - Performed data validation and integrity checks for financial transactions (CIF850, CIF810, CIF856)

- Conducted impact analysis for requirement changes and prepared Technical Specification Documents - Created test plans for unit testing and QA validation ensuring quality deployments - Provided production support for end-to-end order flow from receipt to invoice generation - Monitored system performance and logs to identify and resolve issues - Collaborated with business teams through JAD sessions to gather requirements

Security & Monitoring Aspects: - Implemented secure file transfer protocols for sensitive business data - Maintained audit trails and logs for regulatory compliance - Monitored batch processing for anomalies and system issues - Ensured data integrity through validation routines and error handling

Technical Environment: COBOL, DB2, IMSDB, JCL, SFTP, Unix/Linux, JIRA

Desktop Support Engineer | NetConnectGlobal, Bangalore, India | Oct 2016 – Jul 2017

Banking Sector – Societe Generale

Provided IT infrastructure support and network administration for banking operations.

Key Responsibilities: - Managed network administration including IP handling, remote access allocations, and connectivity troubleshooting - Administered user access rights, password resets, and authentication issues - Resolved ITSM tickets related to hardware, software, and network connectivity with 95% SLA compliance - Maintained IT asset inventory and hardware lifecycle management - Performed secure data sanitization and device disposal following banking security standards - Supported production systems ensuring uptime and stability

Technical Environment: Windows, Active Directory, Network Administration, ITSM Tools, Data Destruction Tools

---

Trainee Engineer | TLE Technologies, Bangalore, India | Sep 2015 – Sep 2016

Aviation Sector – Airbus

- Managed IT asset lifecycle and inventory tracking
- Performed hardware/software installations, configuration, and troubleshooting
- Conducted secure data destruction following industry standards
- Handled ITSM ticket resolution for end-user support

EDUCATION

Cybersecurity Bootcamp | Ironhack | Apr 2025 – Oct 2025
Focus: Cybersecurity & Network Security Specialist, Digital Forensics, Threat Intelligence

Diploma in Software Engineering | 42 Wolfsburg, Germany | Sep 2024 – Feb 2026
Focus: Computer Science, Programming, System Architecture

M.Tech in Mechanical Engineering | JNTU Anantapur, India | Aug 2017 – Aug 2019

B.Tech in Aeronautical Engineering | Malla Reddy College, India | Aug 2011 – Aug 2015

CERTIFICATIONS

- **RMT CY PT** (Cybersecurity Penetration Testing) | Expected: April 2025
- **Excel: Mother of Business Intelligence** | Completed
- **CompTIA Security+** | In Progress (Expected: Q2 2025)

ADDITIONAL SKILLS

Languages:
- English: Proficient
- German: Beginner (A1/A2 level)
- Hindi: Native
- Telugu: Native

Soft Skills:
- Analytical Thinking & Problem Solving - Attention to Detail in Security Analysis - Team Collaboration in Incident Response - Clear Communication of Technical Security Concepts - Continuous Learning in Evolving Threat Landscape

Work Authorization:
Authorized to work in Germany | No visa sponsorship required

PROFESSIONAL INTERESTS

- Threat Intelligence & Malware Analysis
- Cloud Security (AWS, Azure)
- Security Automation & SOAR
- Incident Response & Digital Forensics
- Red Team / Blue Team Exercises
- Security Research & Vulnerability Disclosure

CAREER TRANSITION TO SOC ANALYST

Transitioning from Mainframe Development to SOC Analyst roles, leveraging 5+ years of experience in:

Data Security Foundation: - Managed secure transmission and storage of sensitive healthcare (HIPAA) and financial data - Implemented data validation routines and integrity checks preventing data breaches - Utilized encryption protocols (SFTP, MFT, AWS) for secure data transfer - Maintained audit trails and compliance reports for regulatory requirements

System Monitoring & Incident Management: - Provided 24/7 production support for critical systems in healthcare and retail sectors - Monitored batch job logs and system events to identify anomalies and failures - Performed root cause analysis and troubleshooting for system incidents - Ensured system uptime and resolved issues impacting business operations

Trained for SOC Operations: - Currently completing Ironhack Cybersecurity Bootcamp (2024-2025) focused on SOC Analyst skills - Built Docker-based SOC Detection Lab with ELK Stack, Wazuh, and Suricata for hands-on practice - Developed detection rules, threat hunting techniques, and incident response procedures - Practiced with industry-standard tools: Splunk, Wireshark, Nmap, Metasploit, Burp Suite

Combining operational IT experience with targeted cybersecurity training to contribute as a SOC Analyst protecting organizations from evolving threats.
